

AI Drug Innovation Accelerator

Website Development Proposal & Functional Requirements

From Research to Innovation. From Innovation to Market.

1. Project Overview

The AI Drug Innovation Accelerator website shall be developed as a standalone, international-standard accelerator platform rather than as a conventional informational website or a simple section of the AI for Drug Innovation Society website.

The platform should follow the user experience and ecosystem principles of leading global accelerators such as Y Combinator, while maintaining its own identity, mission, governance structure, scientific focus, and Saudi/GCC context.

The objective is to create a digital platform that connects:

Researchers → Founders → Startups → Technologies → Intellectual Property → Validation → Commercialization → Investors → Market

The website must serve as an active platform for:

Applications

- Startup applications
- Research and technology submissions
- Accelerator programs

Discovery & Engagement

- Startup discovery
- Investor engagement
- University commercialization
- Industry partnerships

Network & Resources

- Intellectual property opportunities
- Founder and alumni networking
- Knowledge and resources

The website should communicate a clear message:

We accelerate the next generation of AI-powered medicines and health technologies.

Brand Positioning

Primary Name

AI Drug Innovation Accelerator

Primary Tagline

From Research to Innovation. From Innovation to Market.

Supporting Statement

We help researchers, founders and startups transform promising scientific and AI innovations into validated, investment-ready and market-oriented ventures.

Primary Calls to Action

- Apply to the Accelerator
- Explore Our Startups
- For Investors

A fourth CTA may be included where appropriate: **Submit Your Technology**

Relationship, Design Philosophy & Navigation

1. Relationship with the AI for Drug Innovation Society

The Accelerator and the Society should have distinct digital identities and purposes, while remaining clearly connected.

Parent Organization

AI for Drug Innovation Society

Primary role:

Society • Governance • Membership • Community • Public Benefit • Programs

Accelerator

AI Drug Innovation Accelerator

Primary role:

Startups • Research • Technology • Acceleration • Commercialization • Investment Readiness

The website should clearly communicate the institutional relationship:

The Accelerator website may link to the Society's official website, governance information, and other institutional resources.

Design Philosophy

The developer shall not build a conventional corporate website dominated by long text pages.

The desired experience is:

Clean • Modern • International

Technology-oriented • Founder-focused • Investor-friendly

Scientific • Data-driven • Highly searchable

Mobile-first • Fast • Simple to navigate

The platform should be inspired by the functional simplicity of leading accelerator platforms, without copying another organization's design, branding, content, or proprietary elements.

The website should make it immediately obvious:

- What the Accelerator does
- Who can apply
- What types of technologies are accepted
- How the acceleration process works
- Which companies are participating
- How researchers can submit technologies
- How investors can engage
- How partners can collaborate

5. Primary Website Navigation

The recommended primary navigation is:

- 1 Accelerator
- 2 Apply
- 3 Programs
- 4 Companies
- 5 Researchers
- 6 Investors
- 7 Partners
- 8 Resources
- About

Home Page, Acceleration Model & Application

6. HOME PAGE

The Home Page should be concise, highly visual, and conversion-oriented.
It should not reproduce the full institutional information of the Society.

6.1 Hero Section

We Accelerate the Next Generation of AI-Powered Medicines and Health Technologies.

Supporting Text: We help researchers, founders and startups transform promising scientific, AI and healthcare innovations into validated, investment-ready and market-oriented ventures.

Primary Buttons: Apply to the Accelerator | Explore Our Companies | For Investors

Optional: Submit Your Technology

6.2 What We Accelerate

The Home Page should immediately present the core technology areas.

AI Drug Discovery

Biomedical AI

Pharmaceutical Technologies

Digital Health

Drug & Biomedical Data

AI Models & LLMs

Diagnostics

Biotechnology Platforms

Patents & University Spin-offs

Each category should be clickable and capable of displaying relevant companies, projects, technologies, or resources.

7. THE ACCELERATION MODEL

The website should visually communicate the Accelerator's pathway.

The developer should implement this as an interactive visual element rather than a simple paragraph.

8. APPLY TO THE ACCELERATOR

Apply must be one of the most prominent features of the entire website.
This must be a real application platform, not a simple contact form.

8.1 Who Can Apply?

The application system should support applications from:

Research & Academia

- Researchers
- University teams
- AI teams

Founders & Startups

- Founders
- Startups
- Spin-offs

Technology Owners

- Technology owners
- Patent holders
- Biotechnology teams
- Pharmaceutical technology teams
- Healthcare technology teams

Application Form, Technology, IP & Validation

9. ACCELERATOR APPLICATION FORM

The application should be divided into logical sections.

Section A — Company / Project

- Company or Project Name
- Founder(s)
- Country
- City
- Website
- Contact Email
- Phone
- Current Stage
- Company Registration Status
- Team Size
- LinkedIn / Social Profiles

Section B — The Problem

Applicants should answer:

- What problem are you solving?
- Who experiences this problem?
- Why is this problem important?
- What is the current approach?
- What limitations exist in current solutions?

Section C — The Solution

- What have you developed?
- How does the solution work?
- What makes it different?
- What evidence supports the solution?
- What stage is the technology currently at?

10. TECHNOLOGY

Applicants should identify their technology category.

AI & Data

- Artificial Intelligence
- Machine Learning
- Generative AI
- Large Language Models
- Biomedical Data
- Bioinformatics

Drug & Pharma

- Drug Discovery
- Drug Development
- Pharmaceutical Technology

Bio & Health

- Biotechnology
- Digital Health
- Diagnostics
- Medical Technology
- Computational Biology
- Other

The form should allow applicants to select multiple categories where appropriate.

11. INTELLECTUAL PROPERTY

The application should capture the applicant's IP position.

IP Status

- Granted Patent
- Patent Application
- University Intellectual Property
- Licensed Technology
- Proprietary Technology
- Trade Secret
- Copyright / Software
- Know-how
- No IP Yet
- Other

Additional Fields

- Patent/Application Number
- Jurisdiction
- Filing Date
- Ownership
- Licensing Status
- IP Documentation Upload

The system must include appropriate confidentiality and data-handling notices.

12. VALIDATION STAGE

Applicants should identify the current stage of validation.

The system should allow supporting documentation to be uploaded.

13. BUSINESS & COMMERCIALIZATION

Business Information

- Business Model
- Target Market
- Target Customers
- Current Revenue
- Revenue Model
- Current Commercial Partners
- Commercial Pipeline
- Funding Raised
- Current Valuation — if applicable
- Funding Required
- Commercialization Requirements

14. FOUNDER VIDEO

Applicants should have the option to provide a short founder/team video.

Recommended:

Introduce your team and explain your company or technology in 1–3 minutes.

The video may be uploaded or submitted through an approved video link.

The system should distinguish between information provided by applicants and any independent assessment performed by the Accelerator.

15. APPLICATION MANAGEMENT SYSTEM

The backend must provide an administrative application-management system.

Authorized administrators should be able to:

- Receive applications
- Review applications
- Assign reviewers
- Add internal notes

Programs, Companies, Batches & Investors

16. PROGRAMS

The Accelerator should present programs as structured programs rather than simply listing services.

1	Accelerator Program — 12–16 Weeks Research → Validation → IP → Business → Investment Readiness → Market The exact duration should be configurable by the administrator.
2	Pre-Accelerator For early-stage: Research concepts, Early technologies, Early prototypes, Emerging founders, University projects
3	Research-to-Startup Designed to help researchers and universities explore the transition: Research → Technology → IP → Startup
4	AI Drug Discovery Program Focused specifically on: AI-enabled drug discovery, Computational drug design, Drug repurposing, Biomedical AI, Molecular modeling, Drug data AI models, Pharmaceutical applications
5	Corporate Innovation For pharmaceutical, biotechnology, healthcare and technology organizations seeking: Innovation partnerships, Technology scouting, Research partnerships, AI solutions, Startup collaboration, Commercialization opportunities

17. COMPANIES / PORTFOLIO

A major section of the website should be: **Our Companies**

This should eventually become a searchable AI Drug Innovation Accelerator company directory.

Each company should have an individual profile.

Company Profile

- Company Name
- Logo
- One-line Description
- Founder(s)
- Sector
- Technology
- Stage
- Country
- Website
- LinkedIn
- Accelerator Program / Batch

Profile Content

- Company Description
- Technology Description
- Market
- Key Milestones
- Partnerships
- Media
- Contact / Website

The company controls which information is publicly displayed, subject to the Accelerator's publication policies.

18. BATCHES

The website should support accelerator cohorts.

Example: **Batch 01 — AI Drug Innovation Accelerator — 2027**

Each batch should have:

- Batch number/name
- Program dates
- Companies
- Program description
- Demo Day
- Key outcomes
- Media
- Publications

The system must allow unlimited future batches.

19. DEMO DAY

Demo Day — Meet the next generation of AI Drug Innovation companies.

The page should display the relevant batch and participating companies.

Features: Company profiles, Founder introductions, Technology summaries, Pitch videos, Pitch decks where authorized, Investor registration, Event registration, Media access where appropriate

20. INVESTORS

For Investors — Discover emerging opportunities in AI, pharmaceuticals and biotechnology.

The section may include:

- Accelerator Companies
- Technology Opportunities
- Commercialization Opportunities
- Licensing Opportunities
- University Spin-offs
- Investor Events
- Demo Days
- Investor Registration
- Contact the Investment Team

The website must not represent an investment opportunity as an offer, solicitation, recommendation, guarantee, or regulated investment service unless the applicable legal and regulatory structure permits such language and activity.

Where appropriate, use: **Investment Readiness** and **Investor Connections** rather than automatically stating **We Fund Startups** unless an actual authorized funding mechanism exists.

Researchers, Technology Submission, Universities & Partners

21. INVESTOR REGISTRATION

The website should provide an investor registration form.

Investor Profile

- Name
- Organization
- Position
- Country
- Email
- Investment Focus
- Sector

Additional Details

- Investment Stage
- Geographic Focus
- Typical Investment Range — optional
- Areas of Interest
- Website
- LinkedIn

The system should support approval of investor accounts where required.

22. RESEARCHERS

For Researchers — Have a promising research project?

We help transform promising research into technologies, intellectual property, startups and market opportunities.

Pathway: Research → Technology → IP → Startup → Commercialization → Market

CTA: Submit Your Technology

23. TECHNOLOGY SUBMISSION

This should be separate from the startup application.

A researcher may have:

- Research
- Patent
- Prototype
- Algorithm
- AI model
- Database
- Platform
- Biomedical technology

without having established a company.

Therefore, the website must support: **Submit Your Technology**

with fields such as:

- Research Title
- Principal Investigator
- Institution
- Technology Description
- Development Stage
- IP Status
- Patent Information
- Publication Information
- Commercial Potential
- Industry Application
- Supporting Documents
- Contact Information

24. UNIVERSITIES

The Accelerator platform should provide a dedicated pathway for universities.

Technology Transfer	Research Commercialization	Spin-offs
Intellectual Property	Research Partnerships	Industry Partnerships
Innovation Programs	Accelerator Programs	Innovation Labs

CTA: Partner With Us

25. PARTNERS

Partners should not simply appear as a collection of logos.

Create structured partner categories.

Strategic Partners	Research Partners
Industry Partners	Technology Partners
Investment Partners	Institutional / Regulatory Partners

Each partner profile may include: Logo, Organization Name, Category, Description, Partnership Scope, Website, Related Programs, Related News

Partner publication must be subject to appropriate authorization.

26. BECOME A PARTNER

Dedicated page: **Partner With the AI Drug Innovation Accelerator**

Possible partnership areas:

- Research
- Technology
- Industry
- Commercialization
- Investment
- Mentorship
- Training
- Data
- AI
- Pharmaceutical development
- Biotechnology
- Market access

CTA: Become a Partner

About, Team, CRM & Administration

31. ABOUT THE ACCELERATOR

The About section should remain concise.

Mission	Vision
Accelerator Model	Team
Governance	Programs
Partners	Contact

The detailed governance and institutional information of the Society should remain on the Society's own website, with appropriate cross-links.

32. TEAM

Create profiles for:

- Accelerator Leadership
- Program Directors
- Scientific Advisors
- Industry Advisors
- Mentors
- Experts

Each profile may include: Name, Position, Biography, Expertise, Organization, LinkedIn, Publications where relevant
Profiles should only be published with appropriate authorization.

33. MENTORS & EXPERT NETWORK

The platform should support a structured expert network.

AI Drug Discovery	Pharmaceutical Sciences	Biotechnology
Clinical Development	Regulatory Affairs	Intellectual Property
Commercialization	Investment	Entrepreneurship
Manufacturing	Market Access	

The system should allow experts to register interest in joining the network.

34. CRM / CONTACT MANAGEMENT

The developer should design the platform so that application and registration data can be integrated with a CRM in the future.

Potential entities include:

- Applicants
- Founders
- Companies
- Researchers
- Investors
- Partners
- Mentors
- Alumni
- Events
- Applications
- Technologies

The platform should avoid creating a data structure that prevents future integration.

35. ADMINISTRATIVE DASHBOARD

The website must have a secure administration dashboard.

Administrators should be able to manage:

- Applications
- Companies
- Programs
- Batches
- Researchers
- Technologies
- Investors
- Partners
- Events
- Resources
- News
- Team
- Mentors
- Alumni
- Forms
- Documents
- Website content

36. ROLE-BASED ACCESS CONTROL

The system should support different administrative roles.

Super Administrator	Full system control.
Accelerator Administrator	Programs, applications and companies.
Application Reviewer	

Security, Data Protection & Technical Requirements

37. CONFIDENTIALITY

Because the platform may receive:

- Research
- Patent information
- Unpublished scientific information
- Business plans
- Proprietary technology
- Investor information
- Personal information

the developer must implement appropriate security controls.

The website must clearly distinguish: **Public Information** from **Confidential / Restricted Information**.

Confidential application material must never become publicly accessible through predictable URLs, search engines, media libraries, APIs, or improperly configured permissions.

38. DATA PROTECTION

The developer must implement appropriate privacy and data-protection mechanisms applicable to the operation of the website.

This should include:

- Privacy Policy
- Consent mechanisms where required
- Secure form submission
- Access controls
- Data retention controls
- Secure file storage
- Encryption in transit
- Appropriate encryption/security for stored sensitive information
- Administrative access logging
- Data deletion/retention workflows where applicable

The developer must verify the applicable Saudi requirements before production launch.

39. DOCUMENT & FILE MANAGEMENT

The system should support secure uploads for:

- Pitch Decks
- Research Papers
- Patents
- Patent Applications
- Technical Documents
- Business Plans
- Regulatory Documents
- Videos
- Company Documents

File access must be permission-controlled.

40. SEARCH

The platform should provide global search across: Companies, Programs, Researchers, Technologies, Resources, News, Events, Partners

Search filters should include: Category, Technology, Stage, Program, Batch, Country, Date

41. MULTILINGUAL SUPPORT

The website should support: **English** and **Arabic**

The architecture must support proper bilingual content rather than automatic machine translation alone.

Arabic requirements:

- RTL interface
- Correct typography
- Arabic navigation
- Arabic forms
- Arabic metadata
- Arabic SEO
- Mobile RTL support

English and Arabic content must be independently editable through the CMS.

42. MOBILE-FIRST DESIGN

The platform must work properly on: Desktop, Laptop, Tablet, iPhone, Android, Modern mobile browsers

The Apply experience must be particularly strong on mobile devices.

43. PERFORMANCE

The website should be optimized for:

- Fast page loading
- Optimized images
- Lazy loading
- CDN
- Caching
- Minified assets
- Optimized database queries
- Efficient APIs

Performance should be tested before launch.

44. SEO

The platform must be designed for international discoverability.

SEO should cover: AI drug discovery, AI drug innovation, pharmaceutical AI, biomedical AI, biotech startups, drug discovery startups, Saudi biotech, Saudi AI, pharmaceutical innovation, AI healthcare, research commercialization

The CMS should provide: Meta title, Meta description, Open Graph, Canonical URL, Structured data where appropriate, XML sitemap, Robots controls, SEO-friendly URLs

45. ANALYTICS

The developer should integrate an appropriate analytics solution.

Key measurements should include: Applications (Number of applications, Application sources, Application completion rate, Application abandonment), Companies (Company registrations, Investor engagement), Investors (Investor registrations, Investor activity), Content (Most visited resources, Search queries, Downloads, Event registrations)

No analytics implementation should compromise applicable privacy requirements.

Security, CMS, Integrations & Legal

46. SECURITY

The developer shall implement industry-standard security practices.

At minimum:

Authentication • HTTPS • Secure authentication • Strong password policies • Multi-factor authentication for privileged accounts where appropriate • Secure session management	Access & Data • Role-based access • Protection against common web vulnerabilities • Secure file uploads • Database security • Audit logging	Operations • Backup • Disaster recovery • Security updates • Vulnerability testing before launch
--	--	---

The developer should conduct appropriate security testing before production deployment.

47. CONTENT MANAGEMENT SYSTEM

The CMS should allow authorized administrators to create and update:

- Pages
- Companies
- Programs
- Batches
- Applications
- Resources
- News
- Events
- Partners
- Researchers
- Technologies
- Investors
- Team
- Mentors
- Alumni

The client should not need a developer for ordinary content updates.

48. FUTURE PLATFORM INTEGRATIONS

The architecture should allow future integration with:

- CRM
- Email marketing
- Investor platforms
- Application management
- Event management
- Payment systems where legally appropriate
- University systems
- Research databases
- APIs
- AI services
- Analytics
- Authentication systems

The developer should use a modular architecture to avoid unnecessary platform lock-in.

49. INVESTMENT & COMMERCIALIZATION LANGUAGE

The website must carefully distinguish:

- Acceleration
- Commercialization Support
- Investment Readiness
- Investor Connections
- Licensing Opportunities

from any actual: Investment Activity, Financial Product, Securities Offering, Fund Management, Fundraising — unless the relevant activity is legally authorized and specifically approved.

The developer must not introduce language such as: "Invest Now", "Guaranteed Funding", "We Fund Every Startup" or similar statements unless expressly authorized by the client and legally reviewed.

Preferred wording where applicable: **Become Investment-Ready** | **Connect With Investors** | **Explore Commercialization Opportunities** | **Explore Technology Opportunities**

50. OWNERSHIP & INTELLECTUAL PROPERTY

All website content, design elements specifically commissioned for the project, source code, database structure, configurations, documentation, and other project deliverables shall be addressed clearly in the development agreement.

The developer must specify:

- Source-code ownership
- Hosting ownership
- Domain ownership
- Repository access
- CMS ownership
- Database ownership
- Design-file ownership
- API credentials
- Third-party licenses
- Documentation
- Handover procedure

The Accelerator must not become dependent on the developer for access to its own domain, website, database or essential digital assets.

Development Phases, Acceptance & Final Structure

51. DOMAIN & DIGITAL ASSETS

The Accelerator/Society should retain administrative ownership of:

- Domain name
- Hosting account
- Cloud account
- Email domain
- Analytics account
- Search Console account
- Social media accounts
- Developer repository
- API credentials
- Third-party services

The developer may receive delegated access without becoming the ultimate owner.

52. QUALITY STANDARD

The website must not be delivered as:

- A generic template
- A simple WordPress brochure website
- A static company profile
- A landing page presented as an accelerator platform

The required outcome is a functional digital accelerator ecosystem.

53. DEVELOPMENT PHASES

1	Phase 1 — Discovery & Architecture Requirements validation, Information architecture, User journeys, Technical architecture, Data model, Security architecture
2	Phase 2 — UX/UI Wireframes, Desktop design, Mobile design, Arabic RTL design, English design, Design system
3	Phase 3 — Development Frontend, Backend, CMS, Application system, Database, Authentication, Administration dashboard
4	Phase 4 — Integrations Email, Analytics, CRM where applicable, Forms, File storage, APIs
5	Phase 5 — Testing Functional testing, Mobile testing, Browser testing, Security testing, Performance testing, Accessibility testing, Arabic/English testing
6	Phase 6 — Launch Production deployment, DNS, SSL, Analytics, Search indexing, Backup, Monitoring
7	Phase 7 — Handover Source code, Credentials, Documentation, CMS training, Administrator training, Technical documentation

54. ACCEPTANCE CRITERIA

The project will not be considered complete merely because the visual pages are online.

Functional

- Application system operational
- Technology submission operational
- Company directory operational
- Program management operational
- Investor registration operational
- Partner management operational
- CMS operational
- Search operational
- Arabic/English operational

Technical

- Responsive
- Secure
- Fast
- Stable
- Tested
- Backup configured
- Analytics configured

Administrative

- Client has full administrative access
- Source code delivered
- Credentials transferred
- Documentation delivered
- CMS training completed

55. DEVELOPER PROPOSAL REQUIREMENTS

The developer/company responding to this specification should submit:

- Company profile
- Relevant accelerator-platform experience
- Relevant AI/biotech/healthcare experience
- Proposed technology stack
- UX/UI approach
- Technical architecture
- CMS proposal
- Application-management architecture
- Security architecture
- Hosting proposal
- Development timeline
- Team structure
- Portfolio
- Similar projects
- Maintenance proposal
- SLA
- Warranty
- Full commercial quotation
- Third-party costs
