

WEBSITE DEVELOPMENT MASTER REQUIREMENTS

AI for Drug Innovation Society

جمعية بالذكاء الاصطناعي نبتكر الدواء

Document Details

Document Type: Request for Proposal / Master Website Specification
Project: Complete Website Rebuild and Digital Institutional Platform
Version: 1.0
Date: September 2026
Languages: Arabic and English
Primary Market: Kingdom of Saudi Arabia
Entity Type: Saudi Non-Profit Association

1. IMPORTANT PROJECT STATEMENT

The AI for Drug Innovation Society intends to completely rebuild its official website from the ground up.

This project is not a conventional corporate or informational website redesign.

The new platform must be designed as a professional institutional digital ecosystem representing:

- The Society
- Its AI Drug Innovation Accelerator
- Programs and initiatives
- Research and innovation
- Membership
- Volunteers
- Strategic partnerships
- Academic and industry partners
- Startups and innovators
- Investors
- Knowledge and publications
- Media and communications
- Impact
- Governance
- Transparency and disclosure

The platform must be scalable and capable of supporting future digital services, portals, integrations, and institutional workflows.

The website must also be designed to support the Society's governance, transparency, disclosure, and institutional requirements applicable to Saudi non-profit organizations.

The developer must not represent the website as an official certification of regulatory compliance. Formal compliance and governance assessment remain subject to the applicable authorities and official assessment processes.

1. REGULATORY AND INSTITUTIONAL BASIS

The development team shall take into account the current regulations, rules, guidance, and assessment requirements applicable to Saudi non-profit associations, particularly those issued by the National Center for Non-Profit Sector Development (NCNPS).

As of September 2026, the NCNPS regulatory portal includes, among other instruments:

- Rules of Governance for Associations and Foundations
- The Guide to the Basic Regulation of Associations
- Fundraising Law
- Rules for Beneficial Ownership of Associations and Foundations
- Rules for Social Impact Investment
- Other applicable regulations, circulars, and guidance.

The current NCNPS official assessment service also requires updated disclosure information as part of the official assessment process.

⊗ Critical requirement: The developer shall verify the latest applicable version of every relevant regulation, rule, circular, and guideline immediately before implementation and again before production launch. No outdated regulation, superseded terminology, or obsolete fundraising requirements may be incorporated into the website.

1. PROJECT OBJECTIVES

The website must achieve the following objectives:

3.1 Institutional representation Present the Society as a credible Saudi scientific, innovation, and non-profit institution.	3.2 Governance Provide a clear and structured digital environment for governance, transparency, policies, disclosures, reports, and institutional information.
3.3 Innovation ecosystem Connect researchers, universities, technology companies, pharmaceutical companies, startups, investors, and other stakeholders.	3.4 Accelerator platform Create a dedicated digital presence for the AI Drug Innovation Accelerator.
3.5 Membership Provide a structured membership journey and prepare the architecture for a future member portal.	3.6 Partnerships Create a professional platform for academic, industry, government, technology, investment, and international partnerships.
3.7 Knowledge Develop a scientific knowledge center containing research, publications, reports, and educational resources.	3.8 Impact Present measurable and verifiable institutional impact.
3.9 Communications Provide a professional media center and communication channels.	3.10 Scalability Allow future development without rebuilding the website architecture.

Core Digital Concept & Primary Architecture

1. CORE DIGITAL CONCEPT

The website should be conceived as:

A Digital Institutional Ecosystem for AI-Driven Drug Innovation

rather than simply:

A website for an association.

The overall ecosystem should visually and structurally connect:

1. PRIMARY WEBSITE ARCHITECTURE

The proposed primary navigation shall include:

Primary Navigation

- Home
- The Society
- Governance & Transparency
- Programs & Initiatives
- AI Drug Innovation Accelerator
- Research & Innovation
- Membership
- Partnerships
- Impact
- Knowledge Center
- Media Center
- Contact Us

Additional Calls to Action

- Join Us
- Become a Partner
- Apply to the Accelerator

The final information architecture may be refined during the UX phase, but any major structural change must be approved by the Society.

1. HOME PAGE

The Home Page must be designed as a premium institutional landing page.

6.1 Hero Section

The hero section should communicate immediately:

AI for Drug Innovation Society

Innovation for a Healthier Tomorrow

Suggested supporting statement:

Building a national ecosystem for AI-driven drug discovery, biomedical innovation, research, and impact.

Primary CTAs:

- Explore the Society
- Explore the Accelerator
- Become a Member
- Become a Partner

The final wording will be approved by the Society.

1. HOME PAGE CONTENT SECTIONS

The homepage should include:

01	02	03
Section 1 — Institutional Introduction Short, authoritative introduction to the Society.	Section 2 — Innovation Ecosystem Interactive ecosystem showing: Universities, Researchers, AI, Pharmaceutical Industry, Biotechnology, Startups, Investors, Technology, Regulatory ecosystem, International partners.	Section 3 — Key Programs Dynamic program cards.
04	05	06
Section 4 — AI Drug Innovation Accelerator Short introduction with: From Research to Innovation / From Innovation to Market.	Section 5 — Impact Metrics Examples: Programs, Beneficiaries, Members, Volunteers, Partnerships, Research projects, Startups, Intellectual property, Training activities. No statistic may be displayed unless it is supported by an approved internal source.	Section 6 — Strategic Partners Partner logos displayed only with appropriate authorization.
07	08	09

The Society, Leadership & Governance

8. THE SOCIETY — 8.1 About the Society

Pages should include:

- About Us
- Vision
- Mission
- Objectives
- Values
- Areas of Focus
- Strategic Direction
- Organizational Structure

The developer must use the Society's approved official content and must not independently alter its legal or institutional description.

1. LEADERSHIP — Board of Directors

The website should provide a professionally designed Board section containing only information approved for public disclosure.

Potential fields:

- Name
- Position
- Board role
- Short professional biography, if approved
- Board term, where appropriate

The developer must not publish personal information that is not approved for publication.

1. GOVERNANCE & TRANSPARENCY

This must be one of the most prominent sections of the website.

Main title: Governance & Transparency

The section shall include, where applicable and approved for public disclosure:

Governance

- Basic Regulation
- Governance Framework
- Board of Directors
- Committees
- Organizational Structure
- Policies
- Internal Regulations

Transparency & Disclosure

- Institutional disclosures
- Governance disclosures
- Conflict-of-interest information
- Related-party disclosures where applicable

Approved Reports

- Annual reports
- Financial reports
- Governance-related information

Institutional Documents

- Regulations
- Policies
- Procedures
- Reports
- Official documents

13. GOVERNANCE EVIDENCE ARCHITECTURE

The CMS must allow each published governance item to be associated internally with:

- Requirement/category
- Document
- Responsible department
- Responsible person/role
- Approval status
- Approval date
- Publication date
- Last review date
- Next review date
- Version
- Supporting evidence

This will create an internal **Governance Evidence Matrix**. The matrix should be available to authorized administrators and should not automatically be exposed to the public.

1. IMPORTANT GOVERNANCE DISCLAIMER

The website must not state:

"100% compliant with NCNPS"

or any similar statement unless such statement is supported by an official current assessment.

The website should instead use language such as:

"The Society is committed to transparency, governance, accountability, and compliance with applicable regulatory requirements."

Formal NCNPS assessment is a separate official process. The current NCNPS service describes its official assessment as a process for determining the organization's official compliance level based on specified standards.

1. BENEFICIAL OWNERSHIP / BENEFICIAL OWNER INFORMATION

The developer must treat beneficial-owner information as a regulated disclosure matter, not simply as ordinary website content.

The NCNPS currently has specific rules and a dedicated disclosure service concerning beneficial ownership.

Therefore:

- Do not independently publish sensitive information.
- Do not create an unofficial "beneficial owner" database.
- Do not duplicate government records unnecessarily.
- If a public reference is required, it should be based on the applicable current NCNPS requirements and approved by the Society.

1. EXECUTIVE MANAGEMENT

Dedicated section for:

- Executive leadership
- Departments
- Institutional functions
- Contact channels where appropriate

11. ORGANIZATIONAL STRUCTURE

Interactive organizational chart:

General Assembly / Governance → Board → Executive Management → Departments / Units / Programs

The final organizational structure must be based on the Society's approved organizational documents.

Document Management, Workflows & Accelerator

16. DOCUMENT CENTER

Create a centralized **Document Center**. Each document should contain structured metadata:

- Document title
- Category
- Document type
- Year
- Version
- Issue date
- Last updated
- Next review date
- Responsible department
- Language
- Public/Internal status
- Approval status
- File format
- Download
- Archive status

17. DOCUMENT VERSION CONTROL

The CMS must support:

Draft → Review → Approval → Publication → Review → Archive

Previous versions must remain available to authorized administrators.

Public users should normally see only the approved/current version unless historical versions are intentionally published.

1. INTERNAL CONTENT APPROVAL WORKFLOW

The platform should support role-based workflow:

1. AI DRUG INNOVATION ACCELERATOR

The Accelerator must have a dedicated section and visual identity within the Society's ecosystem, while maintaining clear institutional ownership and relationship to the Society.

The website should not inadvertently present the Accelerator as a separate legal entity unless such status has been formally established and approved.

1. ACCELERATOR PAGES

What We Accept

Examples:

- Advanced research projects
- Technologies and platforms
- AI models
- LLMs
- Databases
- Knowledge bases
- Patents
- Inventions
- Proof of Concept
- Prototypes
- Specialized startups

What We Offer

- AI & LLM Drug Discovery
- Data Validation
- IP Support
- Commercialization
- Connectivity
- Talent

These categories reflect the current Accelerator concept supplied by the Society.

1. ACCELERATION PATHWAY

The current Accelerator concept should be converted into an interactive digital pathway:

Programs, Research, Knowledge & Membership

1. ACCELERATOR APPLICATION

Develop an online application system. Applicants should be able to submit:

- Applicant information
- Project information
- Scientific area
- Technology
- Development stage
- Team
- Intellectual property
- Publications
- Proof of Concept
- Commercial potential
- Funding requirements
- Supporting documents

The system should generate an **Application ID** and allow authorized staff to manage:

- Status
- Reviewer Notes
- Documents
- Evaluation
- Decision
- Communication

23. PROGRAMS & INITIATIVES

Create a dynamic program-management section. Current approved/authorized program content should be entered only from the Society's official documentation.

The supplied documents include official technical approval records for programs including:

- Dawa'i Bi Tareeqati / "My Medicine, My Way"
- Khatwat Al Alf Mile / "The Thousand-Mile Step"
- AI Drug Discovery Training Unit
- AI for Drug Innovation Hackathon.

24. PROGRAM PAGE TEMPLATE

Every program should have:

Identity

- Program title
- Overview
- Objectives
- Target audience
- Status
- Start date
- End date

Delivery

- Partners
- Activities
- Outputs
- Outcomes
- Beneficiaries
- Impact

Resources

- Media
- Reports
- Documents
- Registration/application
- Contact

25. RESEARCH & INNOVATION

Create a major section: **Research & Innovation**

- Research Projects
- Researchers
- Publications
- Technologies
- Innovation Projects
- Intellectual Property
- Patents
- Databases
- Research Collaboration
- Technology Transfer
- Translational Research

26. KNOWLEDGE CENTER

The Knowledge Center should include:

Content Types

- Reports
- Research
- White Papers
- Publications
- Studies
- Guides
- Articles

Educational Resources

- AI & Drug Discovery
- Biotechnology
- Healthcare AI
- Pharmaceutical Innovation

It must include: Search, Categories, Tags, Filters, Year, Author, Topic, Download.

27. MEMBERSHIP

Create a dedicated **Membership** section:

- Why Join
- Membership Categories
- Eligibility
- Membership Benefits
- Application
- Renewal
- Frequently Asked Questions

The exact membership categories and requirements must be taken from the Society's approved membership framework. The developer must not invent membership classes, fees, rights, or benefits.

1. FUTURE MEMBER PORTAL

The architecture must support a future secure Member Portal. Potential features:

- Member profile
- Membership status
- Renewal
- Certificates
- Events
- Courses
- Volunteer opportunities
- Research opportunities
- Announcements
- Member services

Partnerships, Impact, Media & Contact

29. VOLUNTEERING

Create: **Volunteer With Us**

Features: Volunteer opportunities, Areas, Requirements, Application, Event participation, Volunteer hours, Certificates, Volunteer records.

30. PARTNERSHIPS

Create a major section: **Partnerships**

Strategic Partners	Academic Partners
Research Partners	Industry Partners
Technology Partners	Investment Partners
Government / Institutional Partners	International Partners

Only authorized relationships may be represented as official partnerships.

1. BECOME A PARTNER

Create a dedicated conversion page: **Become a Partner**. The user should select:

- Academic Partnership
- Research Partnership
- Industry Partnership
- Technology Partnership
- Strategic Partnership
- Investment
- Startup Collaboration
- International Collaboration
- Sponsorship, where legally applicable

The form should dynamically adapt to the selected category.

1. INVESTMENT & COMMERCIALIZATION

Create: **Investment & Growth**

Possible content: Innovation opportunities, Startups, Technologies, IP opportunities, Commercialization, Strategic investment, Industry collaboration.

All investment-related content must undergo appropriate internal approval before publication.

1. IMPACT

Create a dedicated: **Our Impact**

Possible indicators: Programs delivered, Beneficiaries, Volunteers, Volunteer hours, Members, Researchers, Research projects, Partnerships, Startups, IP, Patents, Products, Training activities.

Each metric must have: Source + reporting period + responsible owner. No unsupported numbers.

34. MEDIA CENTER

Create: **Media Center**

Including: News, Press Releases, Events, Conferences, Announcements, Photo Gallery, Video, Interviews, Accelerator News, Partner News, Publications.

35. MEDIA KIT

Provide a downloadable Media Kit containing approved:

- Logo
- Brand assets
- Society description
- Official biography/boilerplate
- Approved images
- Contact information
- Media guidelines

36. CONTACT CENTER

Create: **Contact Us**

Categories: General Inquiry, Membership, Partnership, Accelerator, Research, Investment, Volunteer, Media, Complaint, Suggestion, Other.

Every submission should generate an internal reference/ticket number.

1. COMPLAINTS, SUGGESTIONS AND REPORTING CHANNEL

Create a secure channel for: Complaints, Suggestions, Concerns, Reporting.

The system must protect submitted information and restrict access according to role.

1. SEARCH

A centralized search engine should search: Pages, News, Programs, Events, Documents, Reports, Research, Publications, Partners, Knowledge Center. Filters should be available.

Bilingual Architecture, UX/UI & Design System

1. BILINGUAL ARCHITECTURE

The platform must be fully bilingual:

Arabic

RTL

English

LTR

Arabic and English content must be independently manageable. The CMS should identify missing translations.

The developer must not rely on automatic machine translation for official institutional, legal, governance, or regulatory content without human review and approval.

1. UX/UI DESIGN

The visual direction should be:

Institutional

Scientific

Premium

Modern

Saudi

Innovative

Trustworthy

Clean

Human-centered

Avoid:

- Excessive visual effects
- Generic corporate templates
- Overloaded animations
- Unnecessary 3D
- Stock imagery that weakens credibility
- Excessive gradients
- Inconsistent iconography

41. DESIGN SYSTEM

The developer must establish a formal Digital Design System including:

- Typography
 - Colors
 - Buttons
 - Cards
 - Forms
 - Tables
 - Tabs
 - Navigation
 - Modals
 - Alerts
- Badges
 - Timelines
 - Statistics
 - Charts
 - Filters
 - Search
 - Footer
 - Responsive behavior

The Society's existing brand identity should be preserved and professionally translated into the digital environment.

Accessibility, Performance, Security & Administration

1. ACCESSIBILITY

The website shall be designed toward: **WCAG 2.2 AA** including:

- Keyboard navigation
- Screen-reader support
- Appropriate color contrast
- Visible focus states
- Alt text
- Accessible forms
- Semantic HTML
- Skip navigation
- Accessible menus
- Accessible tables
- Accessible downloadable documents where reasonably practicable

43. MOBILE RESPONSIVENESS

The website must be fully responsive across: Smartphones, Tablets, Laptops, Desktop, Large displays.

The mobile experience must not be treated as a reduced version of the desktop site.

1. PERFORMANCE

The website must be optimized for:

- Fast page loading
- Core Web Vitals
- Image optimization
- Lazy loading
- Caching
- CDN
- Compression
- Efficient JavaScript
- Efficient CSS
- Server-side optimization where appropriate

Performance must be tested before launch.

1. CYBERSECURITY

The developer must provide appropriate security architecture including, as applicable:

- HTTPS/TLS
- WAF
- Secure headers
- Content Security Policy
- HSTS
- Secure cookies
- Role-Based Access Control
- MFA for privileged accounts
- Rate limiting
- API security
- Form protection
- Malware protection
- Vulnerability scanning
- Security updates
- Audit logs
- Backup
- Disaster recovery

46. ADMINISTRATIVE SECURITY

Administrative access must use: **Role-Based Access Control**

Suggested roles:

- Super Administrator
- Governance / Compliance
- Executive Management
- Finance
- Programs
- Accelerator
- Membership
- Partnerships
- Research
- Communications
- Media
- Reviewer / Auditor

No administrator should receive broader privileges than necessary.

1. AUDIT LOG

The CMS must record significant administrative activity: User, Date, Time, Action, Content affected, Previous status, New status, Approval status.

48. BACKUP AND DISASTER RECOVERY

The proposal must specify: Backup frequency, Backup retention, Backup location, Database backup, File backup, Recovery Point Objective (RPO), Recovery Time Objective (RTO), Disaster recovery procedure.

The Society must retain ownership/control of its critical infrastructure accounts wherever practicable.

1. DATA PROTECTION

The developer must implement appropriate privacy and data-protection controls.

The website must not publicly expose: National ID numbers, Bank information, Private signatures, Private contact information, Passwords, Sensitive applicant information, Confidential project information, Confidential IP information — unless specifically authorized and legally appropriate.

1. DONATIONS

The donation functionality requires special treatment. The developer must not activate or implement an unapproved fundraising mechanism.

The current NCNPS regulatory portal lists the Fundraising Law as the applicable current framework, and the NCNPS states that the system governs fundraising activities and campaigns by non-profit organizations.

Therefore, any future donation module must be designed around: Applicable authorization, Approved fundraising channels, Approved campaign information, Donor protection, Transaction security, Reporting, Financial reconciliation.

The developer must not assume that a "Donate Now" button is permissible merely because the organization is a non-profit.

This is particularly important because the Society's current official program approval documents contain explicit conditions concerning fundraising for those programs.

1. DOCUMENT VERIFICATION

Where appropriate, the system should support document verification. The Society's official approval documents include QR-based verification mechanisms.

A future verification system may provide: Document ID, Verification status, Issue date, Document type, Validity status.

However, the website must not imply that it is a government verification service unless an official integration exists.

CMS, SEO, Analytics, Technology & Ownership

1. CMS REQUIREMENTS

The CMS must allow authorized administrators to manage:

- Pages
- News
- Programs
- Events
- Partners
- Documents
- Reports
- Research
- Publications
- Members
- Volunteers
- Applications
- FAQs
- Media
- Statistics
- Governance content

without requiring developer intervention for routine updates.

1. CONTENT GOVERNANCE

Every important content type should have:

Owner → Reviewer → Approver → Publisher → Review Date

The system should support automatic reminders when content requires review.

1. FUTURE INTEGRATIONS

The architecture must allow future integration with: CRM, Membership systems, Email, SMS, Event platforms, Learning platforms, Payment services where authorized, Analytics, External APIs, University systems, Partner systems, Government platforms where officially supported.

The architecture should use APIs and modular components rather than hard-coded dependencies.

1. DATA MODEL

The proposed architecture should be capable of supporting entities such as: Users, Roles, Members, Board Members, Committees, Partners, Strategic Partners, Programs, Projects, Accelerator Applications, Startups, Researchers, Volunteers, Research Projects, Publications, Intellectual Property, Patents, Events, News, Reports, Documents, Policies, Disclosures, Financial Reports, Campaigns, Complaints, Tickets, Notifications, Translations, Audit Logs.

The developer may propose an alternative architecture, provided it meets the same functional and scalability requirements.

1. TECHNOLOGY STACK

The developer may recommend the technology stack, but the proposal must clearly specify: Frontend framework, Backend framework, CMS, Database, Hosting, Cloud provider, CDN, Storage, APIs, Authentication, Security architecture, Monitoring.

The technology must be: Maintainable, Secure, Scalable, Well documented, Supported, Transferable to the Society.

The Society must not be locked into a proprietary system without explicit contractual agreement.

1. OWNERSHIP

The contract must clearly establish that the Society owns or has the contractual rights necessary to control its: Website, Source code, Database, Content, Design files, CMS data, Documentation, APIs developed specifically for the project, Domain, Hosting account, Analytics accounts, Administrative accounts.

The developer must not retain unilateral control over critical infrastructure.

1. DOMAIN AND DIGITAL ACCOUNTS

Where practicable, the following should be registered in accounts controlled by the Society: Domain, Hosting, Cloud, DNS, CDN, Analytics, Search Console, Email services, Developer repositories, Security services.

The developer should receive delegated access rather than ownership.

54. SEO

The platform must be SEO-ready for Arabic and English. Required capabilities:

- SEO titles
- Meta descriptions
- Canonical URLs
- Open Graph
- Structured data
- Organization schema
- Article schema
- Event schema
- Breadcrumbs
- XML Sitemap
- Robots.txt
- Clean URLs
- Arabic SEO
- English SEO
- Search indexing controls

1. ANALYTICS

The platform should support analytics for: Visitors, Sessions, Traffic sources, Popular pages, Devices, Geographic information at an appropriate aggregate level, Downloads, Membership applications, Partnership applications, Accelerator applications, Contact requests, Conversion rates.

Analytics implementation must respect applicable privacy requirements.

Project Phases, Deliverables, Vendor Requirements & Final Criteria

1. PROJECT PHASES

1. PROTOTYPE REQUIREMENT

Before full development, the developer must submit a clickable prototype covering at minimum: Home, Society, Governance, Accelerator, Program, Membership, Partnership, Impact, Knowledge Center, Contact. The Society must approve the prototype before full development begins.

1. QUALITY ASSURANCE

Before launch, the developer must provide evidence of testing covering:

Area	Requirement
Functional	All features operate correctly.
Security	No critical unresolved security vulnerabilities.
Performance	Performance meets the agreed target.
Accessibility	Accessibility testing completed.
Responsive	Desktop/tablet/mobile testing completed.
Arabic	RTL layout tested.
English	LTR layout tested.
CMS	All administrative functions tested.

1. CONTENT ACCURACY

This is a critical contractual requirement. The developer must not independently:

- Change legal names
- Change license information
- Invent statistics
- Invent partnerships
- Invent programs
- Invent membership categories
- Invent regulatory approvals
- Invent government relationships
- Modify official legal terminology
- Publish unapproved claims
- Claim regulatory compliance
- Represent a non-independent program as a separate legal entity

All such information must originate from Society-approved materials.

1. REGULATORY CHANGE MANAGEMENT

Because Saudi non-profit regulations and NCNPS requirements may be updated, the website architecture must allow content and compliance-related information to be updated without rebuilding the platform.

The developer must provide a mechanism for: Updating regulatory references, Updating policies, Updating disclosure information, Updating reports, Updating governance information, Archiving superseded content.

The developer shall verify the applicable current regulatory framework before launch rather than relying solely on the regulations reviewed during proposal preparation.

1. PROJECT DELIVERABLES

- **Strategy:** Digital strategy, Information architecture
- **Design:** UX, UI, Design system, Responsive designs
- **Development:** Frontend, Backend, CMS, Database, APIs
- **Governance:** Roles, Workflow, Document management, Audit trail
- **Security:** Security configuration, Backup, Access control
- **SEO:** Technical SEO, Structured data
- **Documentation:** Technical documentation, CMS manual, Administrator manual, Training materials
- **Deployment:** Production deployment, Domain configuration, SSL, CDN, Monitoring
